

MEASUREMIX FERTILIZER

The fertilizer is designed for safety. The ratios of water to fertilizer mixture are still the same, despite changes in the waterpressure.

OPERATION:

The fertilizer has a precision watermotor, connected to a piston type injector pump. The fertilizer works on waterpower and doesnot have an electric- or a petrolmotor. The water passing through the "watermotor" provides the necessary energy for driving the pump.

THE MACHINE HAS FOLLOWING DISTINGUISHING FEATURES:

- different methods of use
- good choice of a liquid fertilizer equipment
- economical and cost-reduction
- no lubrication or adjustments necessary
- stable construction for a longer life
- simple operation
- works on water, so no electromotor necessary
- available in mobile and fixed construction
- also advised to use acids

CHOICE FROM 4 DIFFERENT MODELS:

	Rate of flow liter/min.	
	minimum	maximum
MODEL R3	6	50
MODEL R4	10	85
MODEL R6	20	200
MODEL R8	40	400
